45-54	10%
55-64	8%
65-74	5%
75-84	3%
85+	2%

1. **Identify the problem.** The first step is to identify the problem. This involves understanding the situation, the people involved, and the goals that need to be achieved.

2. **Generate ideas.** Once the problem is identified, the next step is to generate ideas. This involves brainstorming and thinking creatively about possible solutions.

3. **Evaluate ideas.** After generating ideas, the next step is to evaluate them. This involves comparing the ideas against the goals and the resources available.

4. **Select a solution.** Once the ideas have been evaluated, the next step is to select a solution. This involves choosing the idea that is most likely to achieve the goals.

5. **Implement the solution.** The final step is to implement the solution. This involves putting the chosen idea into action and monitoring the results.
